

The roots of **Deifel GmbH & Co. KG** have not been forgotten even today. The company still produces pigment preparations for the art and craft sectors which benefit from the advantages of self-mixed colours. All specific demands of these customers can be satisfied by the differentiated colour **range of 110 Dei®Art pigment preparations**. In the crossover area of the overlapping interests of crafts and artists, restorer, artisans up to craft and model making supplies find the pigments they need in a wide range of colours.

### ▶ PIGMENTS FOR ARTISTS

Regarding oxide pigments and earth colours, the fields of application overlap. The coloured pigments, on the other hand, are tailored to the artists' requirements in terms of colour intensity and habitus.

The inorganic colours are mostly available as pure pigments, e.g. **ultramarine, cobalt pigments, chromium oxide green, light yellow pigments** as well as **cadmopone** and pan-grinded **Paris blue**. The organic pigments, which can be hardly handled as pure pigments, are offered as high concentrated pan-grinded blends based on **monoazos, phthalocyanines, chinacridones and dioxazines**.

### ▶ PAINTER HANDCRAFTS

For the suppliers for the painter's crafts we can offer a whole range of earth pigments. Lime-resistant and light fast coloured pigments are supplied as reasonably priced, easy-to-handle pigments whose colour strength is adapted to the needs of the processor.

These pigments can be delivered besides packing in 25 kg also in smaller quantities, as 15 x 1 kg bags of each colour for direct resale. For the retail of art supply we have a complete colour range of the most important pigments available.

### ▶ PIGMENTS IN STUDENT QUALITY

While these pureblooded artist pigments are sorted by the type of pigments, we can offer also our alternative colour range – **pigments in student quality** - which are cheaper but not as strong in colour as the pure pigments.

All **Dei®Art** pigments are also available in 40 x 250 g packing in PET cans of each colour for direct resale.

### ▶ OTHERS

These information are based on our current level of knowledge and experience. It is not a legally binding assurance of certain properties and they do not release producers from the obligation to make own tests.

You can find all relevant technical and colouristic data, fastnesses and application recommendations in our product list.

### ▶ BUILDING INDUSTRY

The demand of the building industry suppliers for cement-fast pigments is covered by the low priced and colour strong **oxide pigments** as well as specially **stabilised ultramarine blue** and for special applications inorganic mixed metal oxide pigments.
